

**Turnkey Project Solutions**

## Total Project Solutions

We specialise in the dismantling, packing, shipping, HSE, retrofit and installation all types of heavy machine tools for just about any industrial sector, including but not limited to:

Oil & Gas (Production and Processing)

Automotive

Steel Production and Processing

Power Generation

Shipbuilding

Over 40 years of experience working worldwide for companies such as Mercedes Benz, Samsung, Hyundai, General Motors, Forja De Monterrey and the Baku Steel Company

## Preparation

Each project is unique because of many factors, such as location, age & condition and time frame for the completion of the project.

Before we even touch a bolt, we look at the project in detail, we take everything into consideration and devise a plan that gives the safest, best cost solution for the entire project.

From the very outset we work with the customers management team to ensure that the project meets their time and budgetary requirements and they are aware of any issues that could affect these criteria.

## Dismantling & Packing

Working from the agreed plan we start by dismantling the equipment and labelling every item using our unique numbering system. We make technical drawings and take photographs from various angles. This is a strict procedure that we follow to ensure that the location of every item can be tracked until it is required for re assembly.

All packing is done to maintain the integrity of the cargo during the shipping process and any materials meet with the specific regulations at the country of destination.

All heavy and oversized items are clearly marked with centre of gravity and lifting/lashing points

## Transport & Shipping

We start with the final packing list produced once everything has been dismantled and packed, we then consult with our in house Cargo Superintendent to devise a load list/stowage plan based on the type of vessel/method of shipment.

Once the project has been dismantled and packed the next stage is to use our network of Vessel owners, Shipping lines, Stevedores and Transport Operators to ensure that your cargo is moved to the destination in a cost effective and timely manner.

## Site Preparation & Installation

While other aspects of the project are being carried out we have a depth and experience of people in our companies to be able to work at various aspects of a project at the same time. So while the dismantling and transport has commenced, we can have another group preparing the site for installation.

Whether you want a basic installation or a complete overhaul, redesign or upgrade we can tailor a package to meet your requirements.
